### V. 1.3 CHANGELOG

---

Resolved an issue with recalling presets when Use Current Scale is enabled.

### V. 1.2 CHANGELOG

---

Support for Push 3 (including Standalone mode).

Support for Live 12's Scale Awareness feature.

Resolved an issue that sometimes prevented the LFOs from running properly.

The Shift parameter (formerly Start) has been redesigned to stay within the bounds of the four voice's current step sizes. The values now range between 0% and 100%.

### V. 1.1 CHANGELOG

---

Resolved an issue that prevented Travelogue's settings from being properly stored with the Live Set.

Fixed an issue that prevented Presets from saving after executing a deletion.

Presets are now stored via a dedicated Save button.

Various UI improvements, including a completely redesigned Preset side view panel, faster navigation, and much more.

Menu text now displays properly in Live's dark themes.

On the Voices control panel, it is now possible to control the lock settings for each voice independently. The default value is the Global Lock setting.

Binary noise (a random distribution of high and low gates) is now an LFO shape option.

Added pulse width control for the LFO square wave shape.

Expressions now work when the Rate parameter is set to 100%.

Resolved an issue that prevented Gate values from registering correctly under certain circumstances.

On the Map control panel, the ability to self-map Travelogue's onboard parameters has been removed. This is to prevent data feedback loops that cause erratic behavior and/or crashes.

The user manual has improved explanations and is updated to reflect the changes in v.1.1.
